

Vacuum Clamps VTC

VTC Series

VTC quick-attach systems are designed for pneumatic vibrators. They are particularly interesting for large container fleets where it is impossible to permanently attach a vibrator (rental, containers in transit, etc.).

VTC quick-release fastening systems consist of suction cups which must be applied to a clean, flat, smooth surface (metal, plastic, etc.). Type VTC15D suction pads are designed to fit onto hoppers, containers and small silos.

To set up, place the VTC attachment on the part to be vibrated and open the small air valve for suction. Depending on the application, you'll need to choose the right vibrator. Prefer unidirectional vibration with a VPA series silent pneumatic piston vibrator series silent pneumatic piston vibrators for cleaning hoppers or forming vaults. Prefer omnidirectional vibration with a pneumatic vibrator with VT turbine pneumatic turbine vibrator for silo discharge or emptying.

Features:

- Consisting of VTC15D or VTC20D vacuum suction pads
- VTC15D system for installation from 650 mm diameter upwards
- Equipped with a safety sling to prevent the unit from falling in the event of air failure.
- Supplied bare, without vibrator

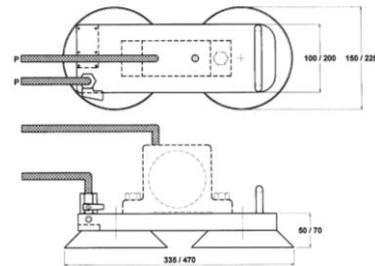

Highlights:

- Ease of use
- Quick installation
- Safe system

Energy : Electric

Sectors : Building and construction, Prefabrication

Applications : Debubbling, Internal vibration of concrete

Type	Compatible vibrators	Ø Suction cup
VTC15D	Turbine vibrators VT till VT31	150
	Air Cushion Piston Vibrators till VPA40	
VTC20D	Turbine vibrators VT50	200
	Air Cushion Piston Vibrators VPA60	

Dimensions : mm
